ABSTRACT

A container having a stabilizer. The container may include an inner housing for holding a substance and an outer sleeve having a taper, the outer sleeve being movably affixed to and surrounding a portion of the inner housing. The inner housing may have a hollow interior and may have an open end and a closed end. The closed end of the inner housing may be substantially flat. The outer sleeve may be movable about a length of the inner housing. The container may also include extendible and retractable "feet." The taper may be sized to contact an automobile cup holder. Additionally, the taper may be curved. The container may also include a mechanism for maintaining a position of the outer sleeve with respect to the inner housing. The mechanism may be a ratchet.
